INSULIGN® Polymer Insulators
Neutral Pin Type
Description
The insulators are manufactured from a proprietary high-density, polyethylene-based, white compound having a dielectric constant that is similar to (and compatible with) polyethylene covered overhead conductor.

The insulators are designed to meet the appropriate dimensional, electrical, and mechanical requirements of the applicable ANSI C29.5 and C29.6 insulator standards.

The bright white color is ideal for differentiating the neutral from the phase conductors, and it makes the insulator easily visible from the ground and in low-light conditions.

Features
- Tie-top design is ideal for use with all PLP ties
- Superior moisture and contamination shedding
- UV-stabilized material
- High-impact resistance
- Lightweight
- Dramatically reduces abrasion
- 100% recyclable
- Bright white makes the neutral clearly identifiable from the ground
