## Tree Guard

## NOMENCLATURE

Length: Standard lengths are shown in separate tables on the catalog pages.
Wall Thickness: Provides a barrier, preventing physical contact with the conductor or its covering.
Color: PVC = Light Gray
Polyethylene = Black

## GENERAL RECOMMENDATIONS

PROTECTION. Tree Guards are designed to protect bare conductors and fabric or plastic covered cables against mechanical abrasion caused by tree limbs or other obstructions.

MATERIAL. Tree Guards are manufactured from a high-impact polyvinyl chloride or polyethylene. These materials are resistant to extreme abrasion and have strong weathering endurance. Although the plastics have high dielectric properties, Tree Guards are not designed for insulation purposes.

LENGTHS. PVC Tree Guards come in 3 ft . and 6 ft . lengths and Polyethylene Tree Guards come in 8 inch and 6 ft . lengths. Tree Guards can be butted together with other tree guards of like materials to achieve a combination of lengths.

SIZE SELECTION. Tree Guard size is determined by the effective diameter of single or grouped conductors. To select the proper size for two or more conductors, arrange the cables to provide a bundle with the smallest possible diameter. The diameter of this bundle, when located within a range on the catalog page, will provide the proper size Tree Guard.

## SAFETY CONSIDERATIONS

1. This product may be reused if in good condition.
2. This product is intended for use by trained craftspeople only. This product SHOULD NOT BE USED by anyone who is not familiar with and trained in the use of it.
3. When working in the area of energized lines with this product, EXTRA CARE should be taken to prevent accidental electrical contact.
4. For PROPER PERFORMANCE AND PERSONAL SAFETY be sure to select the propersize PREFORMED ${ }^{\text {m }}$ Tree Guards before application.
5. PREFORMED ${ }^{\text {mM }}$ Tree Guards are precision devices. To insure proper performance, they should be stored in cartons under cover and handled carefully.

## Tree Guard

## GENERAL RECOMMENDATIONS

Size Selection: In selecting the proper size PVCTree Guard it is necessary to determine the smallest circumscribing circle that will enclose the messenger and cables.

For grouping only one cable with messenger, add the diameters and multiply by a factor of .850 .

$$
C=(D+m) \times .850
$$

For grouping two equal diameter cables, multiply the diameter of one cable times 2.00. Then find the diameter of the maximum messenger that will fit in the interstices of the cables, multiply the diameter of one cable times 666 .

For grouping three equal diameter cables, multiply the diameter of one cable times 2.155. Then to find the diameter of the maximum messenger that will fit in the interstices of the cables multiply the diameter of one cable times .483.

C = D x 2.155

$\mathrm{m}=\mathrm{D} \times .483$

For grouping four equal diameter cables; multiply the diameter of one cable times 2.414. Then to find the diameter of the maximum messenger that will fit in the interstices of the cables multiply the diameter of one cable times .414 .
$\mathrm{C}=\mathrm{D} \times 2.414$

$m=D \times .414$

For grouping unequal diameter cables or messengers too large to fit into the interstices above, the minimum diameter grouping can best be determined by a graphic layout scale.
